Stability, 673
Stabilization, 937, 981, 1001
Standing wave, 371
Stenosis, 489
Stratification, 331
Stratified field, 197
Streamfunction-vorticity formulation, 511
Sub-particle scale (SPS), 913
Subgrid, 511
SUPG, 937, 1117
Surface meshing, 937, 1097
Surface wave, 371

Temperature-jump, 937, 1041
Third-order accuracy, 221
Time splitting method, 77
Turbulence, 371, 439, 1319
Turbulence modelling, 1379
Turbulent, 49
Turbulent flow, 791, 1379
Turbulent swirling flows, 285
Two-fluid model, 937, 1117

Unsteady, 703
Unsteady aerodynamics, 1
Unsteady flow, 773
Unstructured, 1059, 1079
Unstructured meshes, 937
URANS, 261

Variable density, 351
Variably saturated flow, 937, 1205
Viscoelastic fluid, 117
Vortex formation, 117
Vortex instability, 425

Wake, 49
Wall distance, 261
Wall shear stress, 849
Water waves, 469
Wave kinematics, 773
Wavy-walled channel, 235

CONTENTS

Volume 51, Issue Nos. 1–12 (2006)

International Journal for
NUMERICAL METHODS IN FLUIDS

Issue No. 1, 10 May

Numerical simulation of incompressible viscous flow past a heaving airfoil: S. Sarkar and K. Venkatraman 1

An improved MPS method for numerical simulations of convective heat transfer problems: S. Zhang, K. Morita, K. Fukuda and N. Shirakawa 31

Numerical prediction of a turbulent curved wake and comparison with experimental data: M. R. Mokhtarzadeh-Dehghan and N. Piradeepan 49

On steady state computation of turbulent flows using k–ε models approximated by the time splitting method: T. Du, Z.-N. Wu and B. Wang 77

Issue No. 2, 20 May

On the interplay between inertial and viscoelastic effects for the flow in weakly modulated channels: E. Abu-Ramadan and R. E. Khayat 117

A grid-free upwind relaxation scheme for inviscid compressible flows: S. Balasubramanyam and S. V. Raghurama Rao 159

Comparisons of CIP, compact and CIP-CSL2 schemes for reproducing internal solitary waves: K. Nakayama 197

Third-order-accurate semi-implicit Runge–Kutta scheme for incompressible Navier–Stokes equations: N. Nikitin 221

Issue No. 3, 30 May

Numerical study of particulate suspension flow through wavy-walled channels: R. Usha, S. Senthilkumar and E. G. Tulapurkara 235

Turbulence modelling of problem aerospace flows: P. G. Tucker 261

Modelling turbulent swirling flows based on the algebraic two-equation (K–ε) approach: Y.-N. Huang, H.-Y. Ma and H.-J. Chu 285

A simulation of free surface waves for incompressible two-phase flows using a curvilinear level set formulation: W. G. Price and Y. G. Chen 305

An efficient 3D particle transport model for use in stratified flow: J. W. Stijnen, A. W. Heemink and H. X. Lin 331

Issue No. 4, 10 June

Generalized lattice-BGK concept for thermal and chemically reacting flows at low Mach numbers: D. Hänel, U. Lantermann, R. Kaiser and I. Wlokas 351

A coupled boundary element–finite difference model of surface wave motion over a wall turbulent flow: M. Jamali 371

A consistent splitting scheme for unsteady incompressible viscous flows I. Dirichlet boundary condition and applications: J. C.-F. Wong and M. K.-H. Chan 385

Magnetic effect on the formation of longitudinal vortices in a rotating laminar boundary layer: M.-H. Lin 425

A generic, mass conservative local grid refinement technique for lattice-Boltzmann schemes: M. Rohde, D. Kandhai, J. J. Derksen and H. E. A. van den Akker 439

Issue No. 5, 20 June

Numerical simulation of pollutant transport acted by wave for a shallow water sea bay: S. Tao and T. JianHua 469

Flow effects of blood constitutive equations in 3D models of vascular anomalies: P. Neofytou and S. Tsangaris 489

Direct numerical simulation of settling of a large solid particle during bioconvection: P. Geng and A. V. Kuznetsov 511

Direct numerical simulation of particulate flow via multigrid FEM techniques and the fictitious boundary method: D. Wan and S. Turek 531

Boundary element solution of unsteady magnetohydrodynamic duct flow with differential quadrature time integration scheme: C. Bozkaya and M. Tezer-Sezgin .. 567

Issue No. 6, 30 June

Numerical boundary conditions for globally mass conservative methods to solve the shallow-water equations and applied to river flow: J. Burguete, P. García-Navarro and J. Murillo 585

Applications of the artificial compressibility method for turbulent open channel flows: J. W. Lee, M. D. Teubner, J. B. Nixon and P. M. Gill 617

A *priori* tests on numerical errors in large eddy simulation using finite differences and explicit filtering: T. Brandt 635

A new implicit surface tension implementation for interfacial flows: S. Hysing 659

A flow-condition-based interpolation finite element procedure for triangular grids: H. Kohno and K.-J. Bathe 673

Retraction and replacement notice 701

Issue No. 7, 10 July

An improved (9,5) higher order compact scheme for the transient two-dimensional convection–diffusion equation: J. C. Kalita and P. Chhabra 703

A comparative study of the performance of high resolution advection schemes in the context of data assimilation: S. Akella and I. M. Navon 719

A stable second-order mass-weighted upwind scheme for unstructured meshes: L. D. Tran, C. Masson and A. Smaïli 749

Wave kinematic fields from the boundary integral method: R. J. Sobey 773

Numerical analysis of turbulent structure in compound meandering open channel by algebraic Reynolds stress model: H. Sugiyama, D. Hitomi and T. Saito 791

Issue No. 8, 20 July

A framework for CFD analysis of helicopter rotors in hover and forward flight: R. Steijl, G. Barakos and K. Badcock 819

A numerical study of fully developed laminar flows in pipes with two planar curvatures: C. Niewiadomski, M. Paraschivoiu and P. Sullivan 849

Numerical simulations of interfacial instabilities on a rotating miscible droplet in a time-dependent gap Hele–Shaw cell with significant Coriolis effects: C.-H. Chen and C.-Y. Chen 881

Adaptive mesh refinement-enhanced local DFD method and its application to solve Navier–Stokes equations: C. Shu and Y. L. Wu 897

SPH computation of plunging waves using a 2-D sub-particle scale (SPS) turbulence model: S. Shao and C. Ji 913

Issue Nos. 9–10, 30 July–10 August

Special Issue:
Finite Element for Flow Problems (FEF) 2005: Part 1

Editorial: O. Hassan 937

Numerical convergence of the MPFA O-method and U-method for general quadrilateral grids: I. Aavatsmark and G. T. Eigestad 939

Inversion of heterogeneous parabolic-type equations using the pilot points method: A. Alcolea, J. Carrera and A. Medina 963

Stabilized finite elements for 3D reactive flows: M. Braack and Th. Richter 981

On a modification of GLS stabilized FEM for solving incompressible viscous flows: P. Burda, J. Novotný and J. Šístek 1001

An Eulerian approach to fluid–structure interaction and goal-oriented mesh adaptation: Th. Dunne 1017

Analysis of fluid flow through micro-fluidic devices using characteristic-based-split procedure: B. Celik and F. O. Edis 1041

Higher-resolution hyperbolic-coupled-elliptic flux-continuous CVD schemes on structured and unstructured grids in 2-D: M. G. Edwards 1059

Higher-resolution hyperbolic-coupled-elliptic flux-continuous CVD schemes on structured and unstructured grids in 3-D: M. G. Edwards 1079

3D anisotropic unstructured grid generation: A. Ghidoni, E. Pelizzari, S. Rebay and V. Selmin 1097

Petrov—Galerkin finite element stabilization for two-phase flows: M. Giordano and V. Magi 1117

Adaptive discontinuous Galerkin methods with shock-capturing for the compressible Navier–Stokes equations: R. Hartmann 1131

Hierarchic multigrid iteration strategy for the discontinuous Galerkin solution of the steady Euler equations: K. Hillewaert, N. Chevaugeon, P. Geuzaine and J.-F. Remacle 1157

Convergence study of a family of flux-continuous, finite-volume schemes for the general tensor pressure equation: M. Pal, M. G. Edwards and A. R. Lamb 1177

A numerical approach for groundwater flow in unsaturated porous media: F. Quintana, L. Guarracino and R. Saliba 1205

Issue No. 11, 20 August

A fourth-order compact finite volume scheme for fully nonlinear and weakly dispersive Boussinesq-type equations. Part I: Model development and analysis: R. Cienfuegos, E. Barthélemy and P. Bonneton 1217

Structured mesh generation with smoothness controls: Y. Zhang, Y. Jia and S. S. Y. Wang 1255

Improvements in mass conservation using alternative boundary implementations for a quasi-bubble finite element shallow water model: S. Bunya, S. Yoshimura and J. J. Westerink 1277

The Parabolic Spline Method (PSM) for conservative transport problems: M. Zerroukat, N. Wood and A. Staniforth 1297

Reynolds stress modelling of rectangular open-channel flow: H. Kang and S.-U. Choi 1319

Issue No. 12, 30 August

A numerical scheme for strong blast wave driven by explosion: K. Kato, T. Aoki, S. Kubota and M. Yoshida 1335

Numerical analysis of a 3D hydrodynamic contact: C. A. Caciu and E. Decencière ... 1355

Prediction of developing turbulent flow in 90°-curved ducts using linear and non-linear low-Re k–ε models: M. Raisee, H. Alemi and H. Iacovides 1379

An implicit Lagrangian lattice Boltzmann method for the compressible flows: G. Yan, Y. Dong and Y. Liu 1407

Stability of Navier–Stokes discretizations on collocated meshes of high anisotropy and the performance of algebraic multigrid solvers: R. Webster 1419
